

Questionnaire: Hot water domestic

| | |
|---|--|
| Are there distribution losses? | |
| Are there storage losses? | |
| Is supplementary electric water heating used in summer? | |
| What is the water storage volume in litres? | |
| Is cylinder heated by boiler system having separate time control of domestic hot water? | |
| Is there a cylinder thermostat present? | |
| Is manufacturer's declared loss available for cylinder? | |
| What thickness of insulation has cylinder in mm? | |
| What is the primary circuit loss type? <i>Enter 1-11 from list below</i> | |

1. Electric immersion heater
2. Boiler with uninsulated primary pipework* and no cylinder thermostat
3. Boiler with insulated primary pipework and no cylinder thermostat
4. Boiler with uninsulated primary pipework and with cylinder thermostat
5. Boiler with insulated primary pipework and with cylinder thermostat
6. Combi boiler
7. CPSU (including electric CPSU)
8. Boiler and thermal store within a single casing (cylinder thermostat present)

9. Separate boiler and thermal store connected by no more than 1.5 m of insulated pipework
10. Separate boiler and thermal store connected by:
 - uninsulated primary pipe work
 - more than 1.5 m of insulated primary pipe work
11. Group heating
